DETAILED ACTION

Double Patenting

- 1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Omum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).
- 2. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.
- Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3,73(b).
- 4. Claims 1-7, 11, 13-14, 16-17, and 20-25 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 and 5-11 of copending Application No. 10541253 in view of Kolev et al. (US 6, 125,283).

This is a provisional obviousness-type double patenting rejection.

Claims 1 and 21 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Application No. 10541253.

The instant claims are broader in scope than the conflicting claims and thus encompass

Art Unit: 2617

the subject matter previously patented except that the instant claims explicitly details generating a connection deny message whereas the previous claims details generating overhead message. However, Kolev et al. (US 6125283) discloses generating a deny message (See Kolev's figure 5, col.8 lines 5-21 where a deny message is generated before a terminal is switched to another mode). Therefore, it would have been obvious to one skilled in the art to combine the invention of the application 10541253 with the invention of Kolev thereby providing a multimode system that generates a deny message and switch to another system when a malfunction occurs.

Claims 11 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 9, 1 and 11 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented except that the instant claims explicitly details switching a call connection when a malfunction occurs whereas the previous claims details periodically switching from one mode to another. However, Kolev et al. (US 6125283) discloses switch a connection when a malfunction occurs (See Kolev's figure 5, col.8 lines 5-21 where a malfunction occurs and a deny message is generated before a terminal is switched to another mode). Therefore, it would have been obvious to one skilled in the art to combine the invention of the application 10541253 with the invention of Kolev thereby providing a multimode system that generates a deny message and switch to another system when a malfunction occurs.

Claims 2 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 2 of U.S. Application No. 10541253. The

Art Unit: 2617

instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 3 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 3of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 4 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 4 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 5 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 5 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented except that the instant claims explicitly adds the phrase "through which data are transmitted from 1xEV-Do system to the hybrid access terminal" indicating that data are transmitted on forward link. This addition to the claim does not change the scope of the claim with regard to the conflicting claim. This is merely a restatement from claim 4 which states "...a forward link transmitting data from the 1xEV-DO system to the hybrid access terminal..."

Claims 6 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 6 of U.S. Application No. 10541253. The instant claims are broader in scope with the conflicting claims and thus encompass the

Art Unit: 2617

subject matter previously patented. The only difference between the applicant's claim and the conflicting claim is that the applicant uses active voice "...terminal switches..." and the conflicting claim uses passive voice "...terminal is switched..."

Claims 7 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 7 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 13 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 2 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 14 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 2 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 16 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 4 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 17 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 7 of U.S. Application No. 10541253. The

Art Unit: 2617

instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 20 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 6 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 22 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 2 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 23 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 3 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 24 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 4 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Claims 25 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 6 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented.

Page 7

Application/Control Number: 10/541,251

Art Unit: 2617

 Claim 8 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10541253 in view of Kolev et al. (US 6, 125,283) and further in view of Lee et al. (US 6,842,619).

This is a provisional obviousness-type double patenting rejection.

Claims 8 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented except that the instant claims explicitly mentions transmitting the high-rate data "...in one sector." This addition to the claim does not change the scope of the claim. The conflicting claim discloses a 1xEV-DO system for the sole purpose of high data rate communication. The high data rate communication inherently involves use of maximum power during transmission. See Lee et al. US 6,842,619 specifically col.2 lines 14-27 where a Data Rate Controller is disclosed for controlling the data rate for a sector of a cell.

 Claims 9, 10, 18, and 19 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 9 and 10 of

Art Unit: 2617

copending Application No. 10541253 in view of Kolev et al. (US 6, 125,283) and further in view of Ling (US 5,412,686).

This is a provisional obviousness-type double patenting rejection.

Claims 9, 10, 18, and 19 are rejected on the ground of nonstatutory obviousnesstype double patenting as being unpatentable over claim 9 and 10 of U.S. Application
No. 10541253. The instant claims are broader in scope than the conflicting claims and
thus encompass the subject matter previously patented except that the instant claim
explicitly mentions the word coherent detection. The conflicting claim 10 discloses a
pilot channel and the conflicting claim 9 discloses tracking frequency of system. Ling
discloses the limitation of coherent detection (See Ling's col.3 lines 19-35, US
5,412,686). Therefore, It would have been obvious to one skilled in the art to combine
the invention of the above application with Ling thereby providing a system that
discloses pilot channel and use of coherent detection.

 Claims 12 are provisionally rejected on the ground of nonstatutory obviousnesstype double patenting as being unpatentable over claim 1 of copending Application No. 10541253 in view of Kolev et al. (US 6, 125,283) and further in view of Thauvin et al. (US 6,360,109).

This is a <u>provisional</u> obviousness-type double patenting rejection.

Art Unit: 2617

Claims 12 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented except that the instant claims explicitly details receiving a connection acknowledgement message. However, Thauvin et al. (US 6,360,109) discloses the use of a connection acknowledgement. Therefore, it would have been obvious to one skilled in the art to combine the invention of the above application with the invention of Thauvin, thereby providing a system where a connection acknowledgement message is used (See Thauvin's col.6 lines 60-64).

8. Claims 15 is provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10541253 in view of Kolev et al. (US 6, 125,283) and further in view of Thauvin et al. (US 6,360,109) and still further in view of Abrol et al. (US 7,068,669).

This is a <u>provisional</u> obviousness-type double patenting rejection.

Claims 15 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Application No. 10541253. The instant claims are broader in scope than the conflicting claims and thus encompass the subject matter previously patented except that the instant claim explicitly details the use of UATI (Unicast Access Terminal Identifier). However, Abrol et al. (US 7,068,669) discloses the use of UATI. Therefore, it would have been obvious to one skilled in the

Application/Control Number: 10/541,251 Page 10

Art Unit: 2617

art to combine the invention of the above application with the invention of Abrol, thereby providing a system where UATI is used as a session identifier (See Abrol's col.14 claim 19).

Conclusion

- Any inquiry concerning this communication or earlier communications from the examiner should be directed to SAYED T. ZEWARI whose telephone number is (571)272-6851. The examiner can normally be reached on 8:30-4:30.
- 10. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lester G. Kincaid can be reached on 571-272-7922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
